

SILO & BIN CLEANING

Dealing with blockages in silos and bins has always been a tedious process, not to mention extremely dangerous if not addressed properly. SR&FS will simplify this tedious process for you and remove your employees from possible harm. Our highly trained personnel will assess the situation, devise a plan of action, and apply the proper equipment and technique to get the job done.

About SR&FS

Since 1996 Specialty Rescue and Fire Service has provided unequalled emergency response training, consulting and equipment service. Through the years our business has expanded into very differently diverse sectors including the feed mill, food production, automotive, power, steel, and concrete industries. Today we service clients coast to coast and even travel overseas to ensure our clients receive only the highest quality products and services.

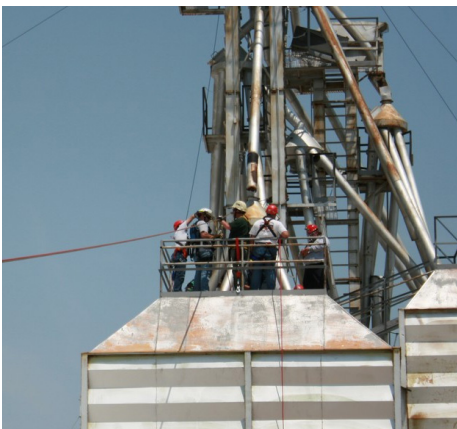

A NEW SAFETY STANDARD

At SR&FS, safety is always our main concern. You can rest easy knowing that SR&FS crews have not only been highly trained in Silo Cleaning, and working in Confined Spaces, but also Confined Space Rescue trained. In the case where drilling is required, we use a fully pneumatic Power Lance drill to keep your product safe from possible contaminants.

Whether the issue with your vessel be bridging, plugging, caking, or any other type of blockage, SR&FS will handle it so that your vessel is back to work for you.
